DELIVERY MODE

02/13/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	10/566,294	KELLEY ET AL.	
	Examiner	Art Unit	
	Sameh H. Tawfik	3721	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12/12/2008 & 02/05/2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-5,9,10,12-16,19,21,23-27 and 30-54 is/are pending in the application.
- 4a) Of the above claim(s) 13-16,19,21,23-27 and 30-54 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) 1-5,9,10 and 12 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 5, 9, 10, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Copland et al. (U.S. Patent No. 4,684,025).

Copland discloses a system for processing a container comprising means for filling (Fig. 1; via 21); means for capping (via 52 covering the container); means for transporting through the production line (it is inherent that the formed container is moving through the production line via some-type of driving means); means for supporting during the transportation (via roller 16 and machine frame); means for cooling the container body filled with the hot product (Figs. 1 and 2; via atmospheric temperature); means for pushing a projection extending from the cooled container (Figs. 2-7; via uneven shaped/projection container 30; shaping/pusher die 64).

Regarding claim 2: it is inherent while the hot container being cooled (via atmospheric temperature) some kind of vacuuming will be caused within the container due to the different between the inner and outer temperatures.

Regarding claim 5: the container body is conveyed by its neck during the filling and capping (Fig. 1; via the container conveyed through the filling and capping stations); note the upper portion of the container could be consider as the neck.

Art Unit: 3721

Regarding claim 9: the means for pushing the projection and it's panels extending from the container body into the interior of the container body (Figs. 5 and 6).

Regarding claim 10: the container body has a grip portion free of structural geometry (Fig. 2; via upper portion of the container).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Copland et al. (U.S. Patent No. 4,684,025) in view of Hiroaki (Japanese Publication No. 63-189224).

Copland does not disclose the use of blow molding to form the container. However, Hiroaki discloses a similar formed container with the use of blow molding with means for inverting the projection extending from the container body into the interior of the container prior to the filling (Figs. 2-7).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have substituted Copland's forming station with the use of blow molding station, as suggested by Hiroaki, in order to simplify the forming step and come up with different shape of the container.

Alternatively, the examiner takes an official notice that the use of blow molding to form plastic containers is old, well known, and available in the art.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have substituted Copland's forming station with the use of blow molding station, as a matter of engineering design choice, to simplify the forming step and come up with different shape of the container.

Response to Arguments

Applicant's arguments filed 12/12/2008 have been fully considered but they are not persuasive.

Applicants argue that the applied art of Copland '025 does not disclose the claimed means for filling hot product, means for cooling as been described in the filed specification, Fig. 4, via cooler C, means for supporting, nor means for transporting the container with a projection extending from the container body.

The examiner maintains that the applied art '025 discloses the claimed means for supporting and transporting the container with a projection extending from the container body as shown in Fig. 1; via projection portions 38 of the container, inherently been transported and supported by some elements of the machine. Further, the applied art '025 inherently will be cooling the finished product via storing them in a cooler/refrigerator and/or atmospheric temperature will be cooling the finished product. The argued issue of '025 not disclosing the claimed filling "hot product", the examiner maintains that the formed hot containers been filed right after being released out from the hot forming station, which will make it inherent the filled product into the hot formed container will be partially hot, which meet the broadly claimed filling "hot product" and/or it is inherent that '025 is capable of filling hot product to the formed containers.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sameh H. Tawfik whose telephone number is 571-272-4470. The examiner can normally be reached on Tuesday - Friday from 9:00 AM to 7:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on 571-272-4467. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
